Personality Disorders

- An enduring pattern of inner experience and behavior that manifests in two or more of the following:
  - cognition (i.e., ways of perceiving and interpreting self and others)
  - Affectivity (i.e., range, intensity); Interpersonal functioning; Impulse control
- The enduring pattern is inflexible
- It leads to significant distress or impairment in functioning
- The pattern is stable and can be traced back to adolescence or early adulthood
Prevalence

- OCPD 2%
- Paranoid 2%
- Antisocial 1-4%
- Schizoid 1%?
- Schizotypical 1%
- Avoidant 1-2%
- Histrionic 2%
- Borderline 2-3%
- Dependent 0.5%
- Narcissistic .5-1%

Etiology (Causes of)

- Likely multi-factorial like almost all other psychiatric diagnoses.
- Genetic and environmental factors such as chaotic home environment and abuse have been implicated in development of maladaptive behavioral patterns.
Personality Disorder Clusters

- Cluster A: suspicious, odd
  - Paranoid, Schizoid, Schizotypal

- Cluster B: dramatic
  - Antisocial, borderline, histrionic, narcissistic

- Cluster C: anxious
  - Avoidant, dependent, obsessive-compulsive
Paranoid Personality disorder

• A pervasive distrust and suspiciousness of others such that their motives are interpreted as malevolent.
  • Suspects others are exploiting or deceiving him
  • Preoccupied with unjustified doubts of loyalty
  • Is reluctant to confide in others because he believes they will use the information against him
  • Reads hidden demeaning meanings into benign remarks
  • Persistently bears a grudge
  • Perceives attacks on his character
  • Recurrent suspicions regarding fidelity of spouse or sexual partner
Schizoid Personality Disorder

• Pervasive pattern of detachment from social relationships and restricted expression of emotion with 4 or more the following:
  • Neither desires nor enjoys close relationships

- A pervasive pattern of disregard for and violation of the rights of others occurring since the age of 15 years as indicated by 3 or more of the following:
  - Failure to conform to social norms with respect to lawful behaviors
  - Deceitfulness and conning others for personal profit or pleasure
  - Impulsivity or failure to plan ahead
  - Irritability or aggressiveness as indicated by repeated fights or assaults
  - Reckless disregard for safety of self or others
  - Consistent irresponsibility
  - Lack of remorse
  - There is evidence of Conduct Disorder with onset before age 15
Borderline Personality Disorder

- Pervasive pattern on instability of interpersonal relationships, self image and affects and marked impulsivity as indicated by 5 or more of the following:
  - Frantic efforts to avoid abandonment
  - Unstable and intense interpersonal relationships characterized by alternating between extremes of idealization and devaluation
  - Identity disturbance
  - Impulsivity in at least two areas that are potentially self-damaging
  - Recurrent suicidal behaviors, gestures or threats or self-mutilating behaviors
  - Affective instability due to a marked reactivity of mood
  - Chronic feelings of emptiness
  - Inappropriate anger
  - Transient, stress-related paranoia
Histrionic Personality Disorder

- Pervasive pattern of excessive emotionality and attention seeking indicated by 5 or more of the following:
  - Uncomfortable in situations in which he is not the center of attention
  - Interaction with others often characterized by inappropriate sexually seductive behavior
  - Displays rapidly shifting and shallow expression of emotion
  - Consistently uses physical appearance to draw attention to self
  - Has a style of speech that is excessively impressionistic and lacking in detail
  - Shows self-dramatization and exaggerated emotion
  - Is suggestible
  - Considers relationships to be more intimate than they are
Narcissistic Personality Disorder

- A pervasive pattern of grandiosity (in fantasy or behavior), need for admiration, lack of empathy as indicated by 5 or more of the following:
  - Grandiose sense of self-importance
  - preoccupied with fantasies of unlimited success, power, brilliance or beauty
  - Believes he is special and can only be understood or should associate with other special or high status people
  - Requires excessive admiration
  - Has a sense of entitlement
  - Is interpersonally exploitive
  - Lacks empathy
  - Is often envious of others and believes others are envious of him
  - Shows arrogant, haughty behaviors or attitudes
Avoidant Personality Disorder

A pervasive pattern of social inhibition, feelings of inadequacy and hypersensitivity to negative evaluation as indicated by 4 or more of the following:

- Avoids social occupations that involve significant interpersonal contact
- Is unwilling to get involved with people unless certain of being liked
- Is preoccupied with being criticized in social situations
- Shows restraint in intimate relationships because of fear of being shamed or ridiculed
- Inhibited in new interpersonal situations because of feeling inadequate
- Views self as socially inept and unappealing
- Is unusually reluctant to take personal risks or engage in any new activities because they may prove embarrassing
Dependent Personality Disorder

- A pervasive and excessive need to be taken care of that leads to submissive and clinging behaviors and fears of separation as indicated by ≥5 of the following:
  - Has difficulty making everyday decisions without an excessive amount of reassurance
  - Needs others to assume responsibility for most major areas of his life
  - Has difficulty expressing disagreement with others because of fear of loss of approval
  - Difficulty initiating projects on his own because of lack of self confidence
  - Goes to excessive lengths to obtain nurturance and support from others
  - Feels uncomfortable or helpless when alone
  - Urgently seeks another relationship as a source of care and support when a relationship ends
  - Is unrealistically preoccupied with fears of being left to take care of himself
Obsessive-Compulsive Personality Disorder

• A pervasive pattern of preoccupation with orderliness, perfectionism and mental and interpersonal control at the expense of flexibility, openness as indicated by 4 or more of the following:
  • Preoccupied with details, rules, lists, order or schedules to the extent that the major point of the activity is lost
  • Shows rigidity and stubbornness
  • Perfectionism that interferes with task completion
  • Excessively devoted to work and productivity to the exclusion of leisure activity and friends
  • Over conscientious and inflexible about matters of morals or ethics
  • Is unable to discard worn or worthless objects even those without sentimental value
  • Reluctant to delegate tasks
  • Adopts miserly spending style toward self and others
Case 1

• Ms Ellie is referred to you by her primary care MD because she is concerned she has an anxiety disorder. When the pt comes into your office she is looking down and when she shakes your hand it is very sweaty. When asked about how her relationships were in junior high she stated “terrible. I never fit in and didn’t do much with other kids because I was afraid they would judge me”.
Case 1: More information

- She has never had an intimate relationship although she would like to have one and has one friend that she has known since childhood. She is intensely afraid of being ridiculed so works as a transcriptionist from her home and sits in the back row when she goes to church. She describes herself as “not as good as other people” and doesn’t like to do new things”. She avoids new relationships unless she “is sure they are going to like me”.

Her diagnosis?
Case 2

- Jason is a 45 year old male who comes to see you to establish primary care clinic. In the ROS he notes he has to be very careful about what he eats because “certain foods I can feel work against my system. I feel them as they are integrated into my body”. He also notes he tries to be careful about what he says “because words have power...they can change the way of things”.
Case 2: More information:

- He is fairly close to his family but doesn’t really have any other people in his life. He denied auditory, visual or tactile hallucinations, has no thought broadcasting or thought insertion and is able to provide organized answers although you notice he speaks in a vague way and his affect is constricted. His appearance is striking because he is wearing all yellow including his shoes, belt, hat and earring which he states “is because yellow is the color that recharges me”.

His Diagnosis?
Case 3

- You are picking up your daughter from daycare and one of the other parents engages you in conversation. He states “I see you got here 5 minutes after the cut off time to...are they going to charge you extra too? You know I think this daycare is always trying to stick it to us. I get this same thing at work. I think they purposely make the clock in times and pick up times inconvenient so they can dock you here and there. Its like a conspiracy I swear!”
Case 3: More information:

- He goes on to tell you that its been the same story his whole life. He has been passed over for promotions at work, he can’t trust his friends any further than he can throw them and he thinks his wife is cheating on him too. With your excellent clinical skills you also find out he doesn’t actually believe there is a plot and doesn’t have any psychotic symptoms.
